What is Polygraph?

Polygraph, commonly known as a lie detector, is a combination of sophisticated device and a set of procedures that measures and records several physiological indicators such as blood pressure, pulse, respiration, and skin conductivity while a person is asked and answers a series of questions.

Polygraph is the only proven tools that can see through deception and reveal what a deceiver will not freely admit.

It has been used widely as an investigation tool in enforcement agencies all around the world and heavily adopted in Singapore.
